EDEKA Retail Performance Diagnostic & Strategic Review

Prepared for: **EDEKA Group**
Prepared by: **Desmond Ugboaja, Mondo INC**
Classification: **Confidential**

Executive Summary

EDEKA Retail Performance Diagnostic

MONDO INC

Client Brief: EDEKA approached Mondo INC with concerns over declining and inconsistent store performance across key regions. The brief was to conduct a full data diagnostic, identify the root drivers of performance variance, and deliver actionable recommendations.

$2.25M	9,789	4,916	4
Total Revenue Analysed	**Transaction Lines**	**Unique Orders**	**Regions Assessed**
Across all regions & categories	2015 to 2018 date range	793 unique customers	Central · East · South · West

Scope of Engagement

- Sales performance by category, region, segment, and shipping mode
- KPI benchmarking across all business dimensions
- Statistical testing of performance variance (t-tests)
- Strategic recommendations for revenue growth

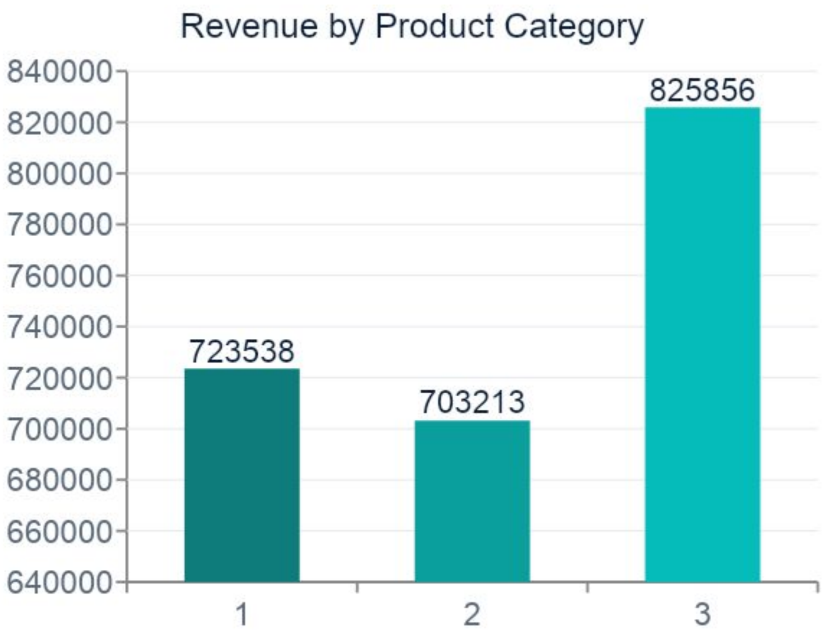
Methodology

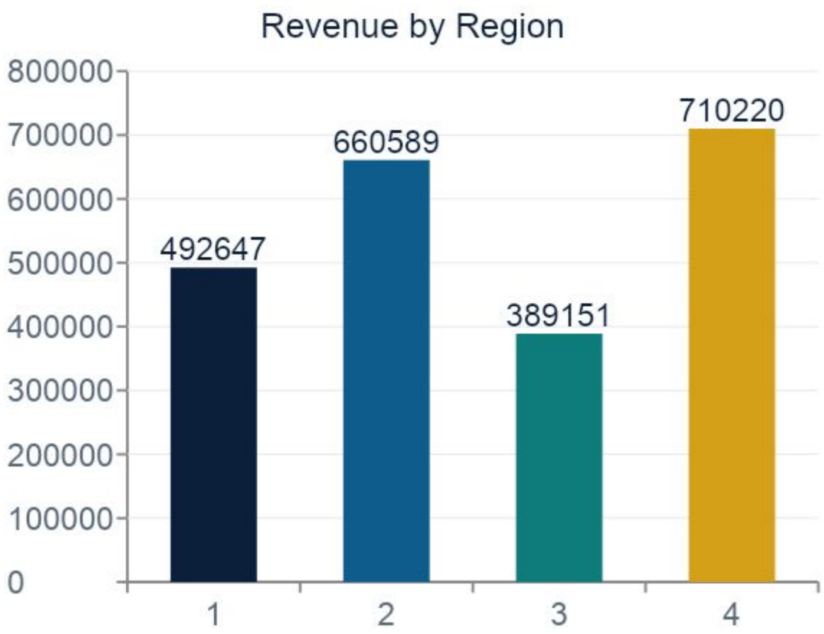
- Exploratory Data Analysis (Python : pandas, seaborn)
- KPI design and calculation across 6 dimensions
- Welch two-sample t-tests for significance testing
- Tableau interactive dashboard for stakeholder review

Revenue Analysis

MONDO INC

Product Category & Regional Performance





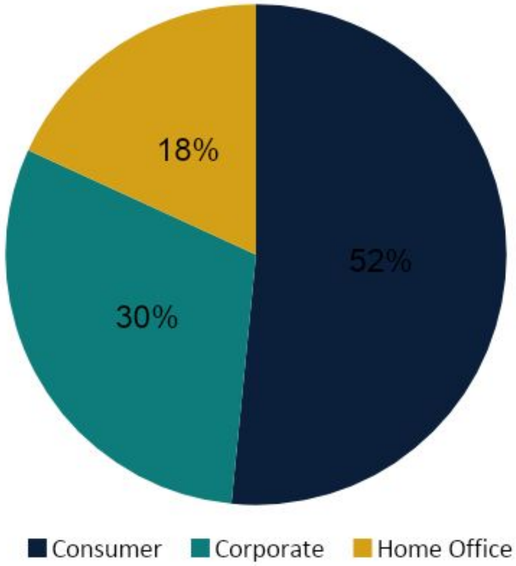
Key Finding: Technology leads all categories at $825K (36.7% of total revenue). The West region outperforms all others at $710K while South significantly underperforms at $389K, signalling a regional execution gap that requires EDEKA's immediate attention.

Customer & Logistics Analysis

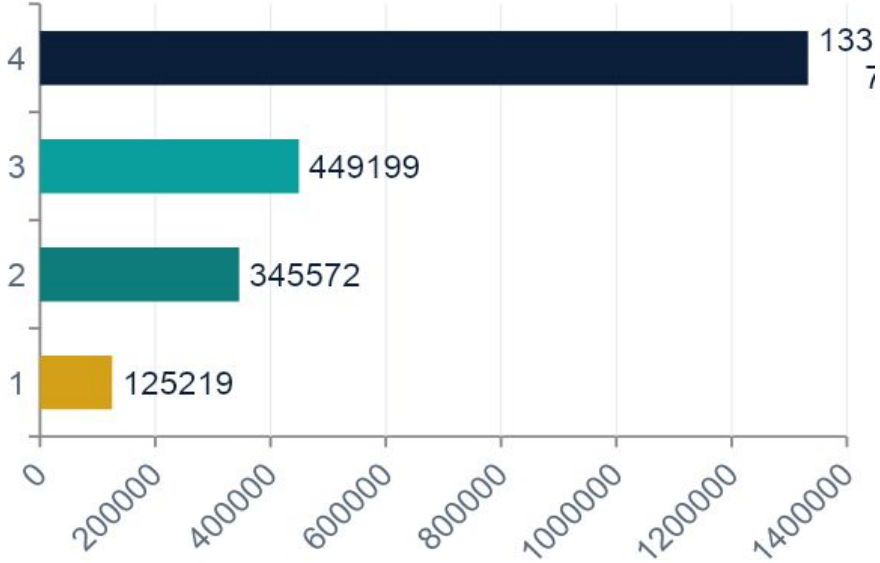
MONDO INC

Segment Behaviour & Shipping Mode Economics

Order Volume by Customer Segment



Revenue by Shipping Mode



Key Finding: Consumers represent 51.6% of order volume, presenting EDEKA's largest retention opportunity. Standard Class shipping generates 59.2% of all revenue , confirming strong price sensitivity in the customer base and an opportunity to drive basket size through delivery incentives.

Statistical Significance Testing

MONDO INC

Are EDEKA's performance differences statistically real, or driven by chance?

Test 1 : Customer Segments

Research Question

Do Consumer and Corporate customers spend different amounts per order?

H_0: No difference in mean order value between segments
H_1: A significant difference exists

Significance Level: $\alpha = 0.05$
Test Type: Welch two-sample t-test

Result: Fail to Reject H_0

p-value ≈ 0.6412 | $p > 0.05$
Performance gap is driven by ORDER VOLUME, not spend per order.

Test 2 : Regional Performance

Research Question

Does the West region generate significantly higher average order value than East?

H_0: No difference in mean order value between regions
H_1: A significant difference exists

Significance Level: $\alpha = 0.05$
Test Type: Welch two-sample t-test

Result: Fail to Reject H_0

p-value ≈ 0.4275 | $p > 0.05$
Regional revenue gap is driven by ORDER FREQUENCY, not basket size.

Strategic Recommendations

MONDO INC

Mondo INC : Priority Actions for EDEKA Leadership

01

HIGH PRIORITY

Address the South Region Performance Gap

South underperforms West by $321K in revenue. Statistical testing confirms the gap is volume-driven, not per-order value. Mondo INC recommends a regional activation campaign, targeted promotions, increased marketing spend, and operational process review for South-region stores.

02

MEDIUM PRIORITY

Grow Corporate Segment Through Account Management

Consumer leads in volume but Corporate customers carry equivalent order values. Introducing a B2B account management programme with bulk purchase incentives and loyalty tiers can grow Corporate revenue without a proportional increase in order volume.

03

QUICK WIN

Leverage Standard Class as a Basket-Building Tool

Standard Class dominates at 59% of revenue, reflecting strong price sensitivity. Offering free Standard Class shipping above a defined basket threshold (e.g. $300) is projected to increase average order value while maintaining margin on higher-value orders.
